

SMOKE ALARMS SAVE LIVES

Next-generation smoke alarms mandatory in Queensland—do you have them installed?

Every Queensland home needs the smoke alarms that protect, connect, and comply. If you're building, renovating, renting, or selling, you need interconnected photoelectric alarms right now. It's already the law. And by 1 January 2027, this rule will apply to every home.

Staying compliant not only avoids penalties—it helps keep your family safe.

WHAT THE LAW REQUIRES

- Smoke alarms must be photoelectric and AS 3786–2014 compliant
- Hard-wired or with a non-removable 10-year lithium battery
- Alarms must be interconnected (if one sounds, they all do)
- Installed in:
 - Every bedroom
 - Hallways connecting bedrooms
 - Every storey of the home
